PROFILE

Computer Science student and Viceroy Scholar at Washington State University, specializing in C++ development, cybersecurity, and AI/ML systems. Professional experience in defense-oriented environments. Experienced in networking, secure LLM pipelines, retrieval-augmented generation frameworks, and cyber principles. Passionate about security engineering, AI research, and turning real-world problems into elegant technical solutions.

EDUCATION

Washington State University - 4.0 GPA	Pullman, WA
<i>Bachelor of Science in Computer Science, Cybersecurity/Math focus</i>	<i>Aug. 2024 – May 2028 (Expected)</i>
VICEROY Scholar - CySER (DoD)	National Institute
<i>Center of Academic Excellence in Cyber Operations Certificate (expected)</i>	<i>Sept 2024 – Present</i>

EXPERIENCE

Cybersecurity Intern	June 2025 – August 2025
<i>Air Force Research Lab/Griffiss Institute</i>	<i>Rome, NY</i>
- Conducted vulnerability analysis on an Air Force contractor operating system 'Project Two Step' Won the final intern cyber operation in a group of 55 competitors - Wrote two Air Force "Cyber BlueBooks" detailing found vulnerabilities in systems - Built highly directional 2.4Ghz antennas for long distance network testing - Presented work to Pentagon cyber professionals and military personnel	
Undergraduate Research — AI/ML Security	January 2025 – May 2025
<i>Washington State University (github.com/isaiah-foster/LLM-defense-research-project)</i>	<i>Pullman, WA</i>
- Implemented attack methods on LLMs to extract PII (whitebox and blackbox) - Built a finetuning pipeline to defend LLMs from PII extraction using Proactive Privacy Amnesia - Identifies key tokens towards PII memorization in training data - High security and low perplexity compared to data scrubbing and differential privacy	

PROJECTS

RAGForge <i>Python, FastAPI, Ollama, ChromaDB, Typer</i>	July 2025 – Present
<i>https://github.com/isaiah-foster/RAGForge</i>	
- Developed a CLI application to allow fast, customizable retrieval augmented generation setup - Implemented the option to run inference models locally or using cloud resources - User-chosen embedding models, language models, chunking methods, and database setup	
R2Gate <i>Cloudflare Workers, R2, TypeScript, Durable Objects</i>	September 2025 – Present
- Built an edge-deployed API security gateway using Cloudflare Workers, Durable Objects, and R2 for distributed authentication, validation, and rate-limiting - Designed and deployed global logging and analytics pipeline through Cloudflare R2 to monitor API traffic and security events.	

SKILLS

Development: C/C++, CUDA, Python, FastAPI, Ollama, ChromaDB, Typer, Git, Linux, Bash, PyTorch, Transformers, Presidio, Pandas

Cyber Tools: Wireshark, Iptables, Netcat, Nmap, Tcpdump, SSH/SCP, Ghidra

ADDITIONAL EXPERIENCES

Triangle Fraternity: Vice President and Founder of WSU's only STEM Fraternity

Cyber Competitions: National Cyber League (CTF), Spokane Cyber Cup, Concord Dawn (DoD offensive op), Fiery Gambit

Awards: WSU IFC Scholar of the month, President's Honor Roll (all semesters), New York State Assembly Certificate of Merit
